

Project Case Study

The construction of a new build single storey nursery unit with an innovative design, depicting an arrangement of children's building blocks with a central main play area and ancillary areas providing toilet, office, kitchen and storage.

The building is steel framed with copper cladding and a single ply roof.

M&E installations include under floor heating.

The works were constructed within an occupied Primary School site working around pupils and staff.

The project subsequently won a RIBA award and a Civic Trust Award and the client gave Steele & Bray praise for their hard work on such an unusual project which wasn't straightforward by any means.
