

Project Case Study

Construction of a single storey Special Needs School, comprising in-situ concrete foundations, masonry walls, hardwood windows and doors under a raftered flat roof. The roof coverings included tiles, decorative zinc and sarnafil. Elevations being made up of facing bricks, render and zinc claddings perforated by clerestory windows.

Installation of M&E services and elaborate door entry and sound monitoring systems.

Fitting out included working kitchens and preparation areas, incl extensive purpose made joinery such as bedroom shutters, beds, wardrobes, lockers, IT workstations and living rooms with television and dvd display units.

Externally, provision was made for play areas including safety tarmac, gardens, paved areas consisting of tarmac and paviments.
