

Project Case Study

Construction of a new build single storey nursery unit, providing a central play area, offices, kitchen, classrooms and toilets, with external car parking.

The building consists of traditional foundations, masonry wall, structural steel frame under a composite steel 'wave' roof, which depicts a 'wave' formation in cross section. Windows and doors were aluminium with security shutters.

The play area was particularly complex, comprising an oval, multi contoured path in different coloured tarmacs and block paved areas.

An interesting feature of the covered play area was a 'Double Conic' fabric tent structure supported on a twin mast.
